Nicholas Taylor

nicholaswtaylor@proton.me | ntaylor.dev |

Summary

Full-stack engineer with a record of delivering medium-to-large features from concept through production across Python/Django services, Vue/Vuetify front ends, and AWS infrastructure. Experienced integrating AI tooling (OpenAI, Cloud Vision) to enhance workflow automation and data-driven product features, and skilled at partnering with product, design, and cross-functional teams. Recognized for mentoring engineers and driving iterative delivery in agile environments.

Experience

Pivott Software Nov. 2023 – Present

Full Stack Software Developer — Django, TypeScript, Vue, AWS, OpenAI, Google Cloud Vision *Remote*

- Translated stakeholder requirements into technical designs and shipped 15+ major features independently, including AI-driven contract processing, a BoldSign signature tracking integration, vendor compliance tracking, and property obligations management. Owned the full lifecycle from early discovery through deployment and iteration.
- Mentored new hires and front-end engineers in Python/Django, reducing ramp-up time and increasing full stack contribution capacity to accelerate feature delivery.
- Led research, vendor evaluation, and production integration of OpenAI and Cloud Vision APIs to power AI-driven document parsing, summarization, and structured data extraction.
- Developed scalable contract processing workflows across backend, frontend, and cloud services, supporting 40+ enterprise customers and automating hundreds of thousands of document operations.
- Built and maintained infrastructure on AWS (EC2, EBS, CloudFormation), CircleCI CI/CD pipelines, Docker containers, and GitHub integrations; ensured a consistent release cadence of 2–3 deployments per week.

Quester Tangent Corporation May 2023 – Nov. 2023

Software Developer - Contract — C, Python, RTOS *Victoria, British Columbia*

- Built and tested embedded C software for global rail transit systems; developed a Python lexical analysis toolchain that automated test workflows, saving 150+ engineering workdays.

Unity Technologies May 2022 – Aug. 2022

Software Developer - Co-op — C#, Python, Google Apps Script, VR *Vancouver, British Columbia*

- Contributed to development and delivery of a VR learning platform; implemented automated video processing and upload tooling in C# to streamline multimedia workflows.

Technical Skills

Languages: Python, TypeScript, JavaScript, C#, C, HTML, CSS
Web & Application Development: Django, Vue, Nuxt, Vuetify, React
Search, Monitoring & Analytics: OpenSearch/Elasticsearch, Sentry, Metabase
AI & Automation: OpenAI APIs (including MCP tooling), Google Cloud Vision, Microsoft Graph, Zapier (webhooks)
Collaboration & Design: Figma, Jira, Confluence

Education

Camosun College Victoria, British Columbia

Associate's Degree, Computer Science *Sep. 2020 – Aug. 2023*

Awards and Honors

Danielle Sim Award in Computer Science
